FLEA TREATMENT PREPARATION

CUSTOMER PREPARATION & AFTERCARE GUIDE

BEFORE YOUR APPOINTMENT

- Vacuum carpets, rugs, upholstered furniture, baseboards, cracks and under furniture, especially pet resting areas.
- Empty vacuum contents outside into a sealed bag and place in an outdoor trash bin.
- Wash pet bedding, blankets and removable washable covers according to their care labels.
- Clear floors of clothes, shoes, toys and clutter; provide access to baseboards and under furniture.
- Schedule a veterinary flea-treatment appointment for every dog and cat before the home treatment. Follow your veterinarian's advice about safe products and timing for each pet.
- Remove or cover food, dishes and pet bowls. Tell us in advance about fish tanks, birds or reptiles.

ON TREATMENT DAY

- All people and pets must vacate during treatment and stay out for at least 4 hours after application. If the product label, drying conditions or technician requires longer, follow the longer period. Re-enter only when cleared by the technician.
- Arrange a safe location for pets during service and the waiting period.
- Tell the technician about infants, pregnancy, respiratory concerns or other sensitive occupants.
- Do not apply additional flea sprays, foggers or powders unless approved by your technician.

AFTER TREATMENT

- Re-enter only after the minimum waiting period and all label conditions, including drying and ventilation where required, are met.
- Continue vacuuming as instructed. Do not shampoo or steam-clean treated carpets until approved by your technician.
- New fleas may emerge from protected pupae after service; follow-up treatment may be necessary.
- Continue veterinarian-recommended flea prevention for every pet and wash pet bedding regularly.

IMPORTANT: Follow the product label and your technician’s specific re-entry instructions.
