House Fly Treatment | Customer Preparation

SILVER BULLET PEST CONTROL | 973-510-2585 | newjerseypestcontrolservices.com

BEFORE YOUR APPOINTMENT

☐ Empty indoor trash and clean trash cans, lids and surrounding floors. Bag and remove food waste, spoiled food and pet waste.

☐ Clean food spills, countertops, under appliances and areas around recycling bins. Keep food and dishes covered.

☐ Check window and door screens, weatherstripping and doors that do not close fully. Tell the technician where flies gather and when activity is highest.

HELP IDENTIFY THE SOURCE

☐ Report any strong odors, dead animals, accumulated garbage, manure, dumpsters, or moisture near the building. Different fly species may require different source removal.

☐ Keep access clear to trash storage, kitchens, windows, doors, garages and other affected locations.

TREATMENT DAY AND AFTERCARE

☐ Remove people, pets and exposed food from treatment areas as instructed. Re-entry times depend on the specific product label and technician directions.

☐ Continue prompt waste removal, trash-container cleaning and screen repairs. Treatment of adult flies alone will not correct an ongoing breeding source.

☐ Contact Silver Bullet if activity persists or a hidden breeding source is suspected.

Follow all technician instructions and pesticide label requirements. / Siga las instrucciones del técnico y de la etiqueta del producto.
